CT SB2

Switch box for CT Analyzer

The CT SB2 switch box is an accessory for the CT Analyzer which allows automatic testing of multi-ratio current transformers. The CT SB2 is connected to all taps of the current transformer and to the CT Analyzer. This allows the transformer ratios of all winding combinations to be automatically tested with the CT Analyzer.

The CT SB2 can either be positioned next to the CT Analyzer or attached to it directly. With a combined weight of 11 kg, this testing system is easily portable and ideally suited to mobile on-site use.
